

Zone Markers

Norfloat International's zone markers have been providing on the water signage for over 25 years. Commonly used to provide hazard warnings and advice to users on and around rivers, canals, lakes and beaches, Norfloat International's range of zone markers are widely regarded as an essential asset to water safety and law enforcement.

Our expertise and extensive range of rigid and inflatable product provide cost effective turnkey solutions to permanent or seasonal applications.

The inflatable A series is a reliable cost effective option, typically used for seasonal beach marking. Optional foam filling and irremovable lettering is available on request.

In addition to the inflatable A series markers, Norfloat International manufactures a range rigid zone markers which have been designed for permanent deployment and harsh environments.

Features

UV stabilised polyethylene

Manufactured from UV stabilised polyethylene, Norfloat International's rigid zone marker buoys provide excellent impact resistance. Its low energy surface reduces marine growth significantly, helping keep maintenance to a minimum.

Foam filled

Norfloat International's zone marker buoys are pressure filled using marine grade polyurethane foam, to a density of 36kg per cubic metre.

Low maintenance sign

Lettering is CNC engraved onto both sides of the UV stable, low- maintenance high density polyethylene sign. The design can be specified by you.

Examples include: • 8 KNOTS • SWIM AREA
• JET SKI AREA • NO SWIMMING • NO DIVING

NN30

The NN30 rigid marker buoy has been designed for all rough, coastal conditions including storms, wave and surf, and is virtually maintenance free. Its internal ballast allows it to be deployed in most depths above one metre using either chain, Polysteel or combination rope, which keeps maintenance and deployment costs to a minimum. Lettering on the NN30 is wrapped around the buoy after manufacture.

NZM120 / NZM200

The versatile NZM120 rigid zone marker, and the larger rigid NZM200 zone marker, have been designed to provide high visibility and clear notification in all situations. The NZM markers are ideally suited for use in canals, rivers and shallow water at applications and can be deployed all year around. Both the NZM120 and the NZM200 have replaceable heavy duty steel and mooring points. Lettering is CNC engraved onto both sides of the high density polyethylene sign.

NCM1100

The largest rigid zone marker, the NCM1100, is commonly used to enforce speed restrictions and warn of underwater hazards, such as reefs, cables and lines. It is ideal for use in severe conditions where maximum visibility is required. Capable of accepting LED lighting, the NCM1100 is also suitable for navigable waterways. Lettering is moulded into the buoy during manufacture and optional mooring points are available to suit the application.

Colours

Rigid markers available in Yellow. Inflatable markers available in Black, Grey, White, Navy Blue, Royal Blue, Signal Green, Signal Red, Fluorescent Orange and Yellow.
